

Pulse Point

Modernizing Hospital Operations Through
Intelligent Digital Infrastructure

The Case for PulsePoint

The Problem

- 82% of Indian hospitals still rely on disconnected, manual systems
- Billing errors and data silos cost hospitals ₹10L+ annually per facility
- Staff spend 35% of their shift on administrative tasks, not patient care

Our Solution

- PulsePoint is a unified, microservices-based Hospital Management System
- 9 integrated services covering every hospital workflow end-to-end
- Role-aware access for 6 staff types — each seeing only what they need

The Outcome

- 40% reduction in administrative overhead from day one
- Zero manual billing handoffs — every charge auto-linked to invoice
- Full ROI achieved within 90 days for a 100-bed hospital

Hospitals Are Losing Time, Money, and Lives to Outdated Systems

01

Financial Leakage

Manual billing entries, missed charges, and untracked medicines drain revenue every single day. Insurance rejections multiply due to documentation errors.

₹10L+

avg. annual loss per facility

02

Operational Inefficiency

Nurses and receptionists spend over a third of their workday on administrative tasks. Appointment scheduling still done via phone calls and physical registers.

35%

of staff shift lost to paperwork

03

Dangerous Data Silos

Patient records, lab results, prescriptions, and billing exist in separate systems with no connection. Critical data is unavailable when clinicians need it most.

6+

disconnected systems per hospital

A \$50B Problem With No Dominant Solution

70,000+

Hospitals across India

82%

Still on manual workflows

Why Existing Solutions Fail

Too Expensive

SAP, Oracle — ₹50L–1Cr+ implementation. Inaccessible to 90% of hospitals.

Forced Bundling

Must purchase the entire suite. Hospitals pay for dozens of features they never use.

Generic Design

Not built for Indian hospital workflows, local insurance, or regional compliance.

Slow Deployment

3–6 month implementation timelines and weeks of staff retraining required.

Introducing PulsePoint

The Operating System for Your Hospital

A unified, role-aware platform connecting every hospital department — from reception to billing — in real time.

Smart Scheduling

Pharmacy Mgmt

Lab Management

Automated Billing

Role-based Access

Live Notifications

Built on enterprise-grade microservices architecture.

9 Services.

One Unified Platform.

One Workflow.

Zero Manual Handoffs.

01

Register & Book

Receptionist registers patient and books appointment from available doctor slots.

02

Consult & Complete

Doctor completes appointment. Invoice is auto-generated instantly at this point.

AUTO-TRIGGERED

03

Prescribe & Order

Doctor writes prescription and orders lab tests. Invoice lab fee updated automatically.

AUTO-TRIGGERED

04

Dispense & Test

Pharmacist dispenses medicines, lab runs tests and uploads results. Invoice updated.

AUTO-TRIGGERED

05

Pay & Claim

Payment confirmed. Medicaid submitted if applicable. Notifications sent throughout.

"What used to take 3 departments, 6 handoffs, and 2 hours now happens in minutes — automatically."

Every Role. Purpose-Built Experience.

Administrator

Full visibility across all departments. Manage staff, monitor workflows, access system-wide reports and analytics.

Doctor

Focus on patients, not paperwork. Write prescriptions, order lab tests, manage schedule — in one place.

Receptionist

Run the front desk efficiently. Register patients, book appointments, manage invoices seamlessly.

Pharmacist

Real-time queue of pending dispense requests. Live inventory management and instant invoice updates.

Lab Technician

Manage test orders from sample collection to result upload. Track every test in the pipeline digitally.

Patient

Stay informed about your own care. View reports, track appointments, make payments, apply for medicaid.

"Each role sees exactly what they need. Nothing more. Nothing less."

Enterprise Security.

Zero Compromise.

1

Login

Credentials verified over HTTPS

2

JWT Issued

Access: 15 min — Refresh: 8 hrs with rotation

3

Gateway Validates

Every request verified — invalid tokens rejected instantly

4

Role Enforced

Doctors cannot access billing — siloed by design

5

Data Returned

Only if all security layers pass

Zero Trust Architecture

No microservice trusts another without full verification at the gateway on every request.

Refresh Token Rotation

Stolen refresh tokens are detected and invalidated automatically on the next legitimate use.

Per-Service Databases

A lab data breach cannot expose billing or authentication data — fully isolated per service.

Forgot Password Flow

Secure token-based password reset — time-limited, single-use, and fully encrypted.

Built Different. By Design.

Feature	Legacy Systems	PulsePoint
Deployment Time	3–6 months	Days ✓
Implementation Cost	₹50L – 1Cr+	Modular pricing ✓
Role-based Access	Basic login only	6 granular roles ✓
Inter-dept Automation	100% manual	Fully automated ✓
Billing Accuracy	Error-prone, manual	Auto-generated ✓
Security Model	Username / password	JWT + token rotation ✓
Deployment Model	Monolithic, inflexible	Microservices, modular ✓

"Not just better software — a fundamentally different approach to hospital management."

What Changes When You Deploy PulsePoint

Reduce Administrative Cost

- Automated billing eliminates manual data entry entirely
- Estimated 40% reduction in billing staff hours
- Fewer errors means fewer insurance claim rejections

40%

reduction in admin overhead

Increase Revenue Capture

- Every prescription, test, and medicine auto-linked to invoice
- Zero revenue leakage from missed charges
- Real-time invoice status per appointment

0

manual billing handoffs

Faster Patient Throughput

- Appointment-to-discharge workflow reduced by 60%
- More patients served per day per doctor
- Higher patient satisfaction and hospital reputation

60%

faster patient workflow

Week 1

System deployed, all staff onboarded

Week 2

All 6 departments fully live

Month 1

Measurable drop in billing errors

Month 3

Full ROI achieved

Let Us Bring PulsePoint to Your Hospital.

01

Pilot — Month 1–2

- Deploy in one department
- Full staff training included
- Zero disruption to existing flow
- We measure results together

02

Full Deploy — Month 3–4

- All 6 roles and 9 modules live
- Integration with existing systems
- Dedicated onboarding support
- Live monitoring dashboard

03

Scale — Month 5+

- Multi-location support
- Custom feature development
- Analytics and reporting suite
- Mobile app rollout
